## Axell Emmanuel President and Founder The Top Four Certifications

*"The Network Administration Advanced Program is the highest level of training available at NTAI. We have put together the Cisco CCNA, Cisco CCNP, Microsoft MCSE and the CompTia Linux + programs to form what we know is the finest, and most useful knowledge available today for Network Administrators. When you master Cisco's routing and switching technology, and you have mastered Microsoft's server operating systems and related technologies you are a professional Network Administrator, but now add Linux to your resume with CompTia's Linux+! You are the ultimate in employability! You can work in any Data Center and hold your own. It is a big program and not for the faint of heart, but it is for the person who wants to earn an excellent salary and command today's top networks. Welcome to your future."*

## CCNA Certification

**Cisco Certified Network Associate (CCNA®)** validates the ability to install, configure, operate, and troubleshoot medium-size route and switched networks, including implementation and verification of connections to remote sites in a WAN. CCNA curriculum includes basic mitigation of security threats, introduction to wireless networking concepts and terminology, and performance-based skills. This new curriculum also includes (but is not limited to) the use of these protocols: IP, Enhanced Interior Gateway Routing Protocol (EIGRP), Serial Line Interface Protocol Frame Relay, Routing Information Protocol Version 2 (RIPv2), VLANs, Ethernet, access control lists (ACLs).

## CCNP Certification

**Cisco Certified Network Professional (CCNP®)** validates knowledge and skills required to install, configure and troubleshoot converged local and wide area networks with 100 to 500 or more nodes. With a CCNP certification, a network professional demonstrates the knowledge and skills required to manage the routers and switches that form the network core, as well as edge applications that integrate voice, wireless, and security into the network. The CCNP curriculum includes building scalable Cisco networks, Cisco multilayer switched networks, securing converged wide area networks, and optimizing converged networks.

## Network Administration Advanced Program

NTAI 's Network Administration Advanced Program will provide you with the education and skills needed to pass all the certification exams.

The **Microsoft Certified Systems Engineer (MCSE)** credential shows clients and employers that you can design, implement, and administer infrastructures for business solutions based on Microsoft Windows Server 2003 and other Windows server platforms. Implementation responsibilities include installing, configuring, and troubleshooting network systems.

This credential also covers **Active Directory**, which helps organizations simplify IT management, strengthen security, extend interoperability of systems and software, and ultimately reduce costs. The MCSE credential not only equips you to manage an organization's Active Directory but to plan strategically for its future network enhancements.

The MSCE credential maps to a variety of job roles, including systems engineer, technical support engineer, system analyst, network analyst, and technical consultant

The **CompTIA Linux+** certification is recognized throughout the industry as a benchmark certification for professionals who work with open-source platforms.

CompTIA Linux+ is a vendor-neutral certification, generic across distributions, targeted to individuals with a minimum of six to 12 months of practical Linux experience. The CompTIA Linux+ exam covers fundamental management of Linux systems from the command line, user administration, file permissions, software configuration and management of Linux-based clients. Oracle and Novell recognize CompTIA Linux+ in certain certification tracks, and it is recommended for Hitachi Electronics and Fujitsu Japan employees.
