**Axell Emmanuel President and Founder**

*"We sat down and put a great deal of thought into this program. How can we take students with basic computer skills and in 40 weeks transform them into Network Administrators? You take the top vendors in the networking field, Cisco, Microsoft and CompTIA and build a Curriculum around them. The Network Administration Program was born."*

The **Network Administration Program** encompasses three of the market leading curriculums. CompTIA A+, Microsoft MCP and Cisco CCNA. You will leave NTAI with **Four** industry leading certifications.

**CompTIA A+ Certification** trains you in the repair, maintenance and troubleshooting of computer systems and desktop operating systems.

### **Microsoft Windows XP Professional MCP Certification**

Microsoft controls the desktop operating system market, and with the Microsoft Windows XP Professional MCP certification you will have the skills needed to support XP Pro, the worlds most Installed desktop OS.

### **Managing and Maintaining a Microsoft Windows Server 2003 MCP Certification**

Microsoft Windows Server 2003 with over a million server licenses sold is the leading business server operating system. You will learn to maintain and manage a Windows Server 2003 installation.

### **Cisco CCNA Certification**

Without question, the Cisco Certified Network Associate certification shows employers that you have the skills to manage routing and switching. Also that you understand Voice, Wireless and Security concepts.

**You will earn four of the top industry certifications.**

## Network Administration Program

NTAI 's Network Administration Program will provide you with the education and skills needed to pass all the certification exams.

**The CompTIA A+ certification is the industry standard for computer support technicians.**

The international, vendor-neutral certification proves competence in areas such as installation, preventative maintenance, networking, security and troubleshooting. CompTIA A+ certified technicians also have excellent customer service and communication skills to work with clients. CompTIA A+ is part of the certification track for corporations such as Microsoft, Hewlett-Packard, Cisco and Novell. Other technology companies, including CompuCom and Ricoh, have made CompTIA A+ certification mandatory for their service technicians. More than 700,000 people worldwide have become CompTIA A+ certified since the program's inception in 1993. The CompTIA A+ certification exam has three separate tracks. The CompTIA A+ Essentials test, exam code 220-601, is required for each applicant. Next you train for the IT Technician module.

**IT Technician:** For applicants intending to work in a mobile or corporate technical environment with a high level of face-to-face client interaction. Potential job roles include IT administrator, PC technician, and Field Service Technician, as well as non-technical jobs that require understanding of computer repair issues. The exam code is 220-602.

At NTAI you will be preparing for the **220-601** test and the **220-602** test.

## Why get certified?

Earning a Microsoft Certification validates your proven experience and knowledge in using Microsoft products and solutions. Designed to be relevant in today's rapidly changing IT marketplace, Microsoft Certifications help you utilize evolving technologies, fine-tune your troubleshooting skills, and improve your job satisfaction.

Whether you are new to technology, changing jobs, or a seasoned IT professional, becoming certified demonstrates to customers, peers, and employers that you are committed to advancing your skills and taking on greater challenges. In addition, certification provides you with access to exclusive Microsoft Certified Professional (MCP) resources and benefits, including opportunities to connect with a vast, global network of MCPs.

## CCNA Certification

**Cisco Certified Network Associate (CCNA®)** validates the ability to install, configure, operate, and troubleshoot medium-size route and switched networks, including implementation and verification of connections to remote sites in a WAN. CCNA curriculum includes basic mitigation of security threats, introduction to wireless networking concepts and terminology, and performance-based skills. This new curriculum also includes (but is not limited to) the use of these protocols: IP, Enhanced Interior Gateway Routing Protocol (EIGRP), Serial Line Interface Protocol Frame Relay, Routing Information Protocol Version 2 (RIPv2), VLANs, Ethernet, access control lists (ACLs).
